We use the integers a, b, and n to create the following series:

$$(a+2^0\cdot b), (a+2^0\cdot b+2^1\cdot b), \ldots, (a+2^0\cdot b+2^1\cdot b+\ldots+2^{n-1}\cdot b)$$

You are given q queries in the form of a, b, and n. For each query, print the series corresponding to the given a, b, and n values as a single line of n space-separated integers.

Input Format

The first line contains an integer, q, denoting the number of queries.

Each line i of the q subsequent lines contains three space-separated integers describing the respective a_i , b_i , and n_i values for that query.

Constraints

- $0 \le q \le 500$
- $0 \le a, b \le 50$
- $1 \le n \le 15$

Output Format

For each query, print the corresponding series on a new line. Each series must be printed in order as a single line of n space-separated integers.

Sample Input

```
2
0 2 10
5 3 5
```

Sample Output

```
2 6 14 30 62 126 254 510 1022 2046
8 14 26 50 98
```

Explanation

We have two queries:

1. We use a=0, b=2, and n=10 to produce some series s_0,s_1,\ldots,s_{n-1} :

$$\circ \ s_0=0+1\cdot 2=2$$

$$\circ \ s_1 = 0 + 1 \cdot 2 + 2 \cdot 2 = 6$$

$$\circ \ s_2 = 0 + 1 \cdot 2 + 2 \cdot 2 + 4 \cdot 2 = 14$$

... and so on.

Once we hit n=10, we print the first ten terms as a single line of space-separated integers.

2. We use a=5 , b=3 , and n=5 to produce some series s_0,s_1,\ldots,s_{n-1} :

$$\circ \ s_0 = 5 + 1 \cdot 3 = 8$$

$$\circ \ s_1 = 5 + 1 \cdot 3 + 2 \cdot 3 = 14$$

$$\circ \ s_2 = 5 + 1 \cdot 3 + 2 \cdot 3 + 4 \cdot 3 = 26$$

$$s_3 = 5 + 1 \cdot 3 + 2 \cdot 3 + 4 \cdot 3 + 8 \cdot 3 = 50$$

$$\circ s_4 = 5 + 1 \cdot 3 + 2 \cdot 3 + 4 \cdot 3 + 8 \cdot 3 + 16 \cdot 3 = 98$$

We then print each element of our series as a single line of space-separated values.
